Monowork Workspace Overview

A multi-project workspace focused on AI/ML development, workflow orchestration, and tensor engineering.

Project	Description	Technologies	Purpose / Features
nexus	Multi-Agent Graph System	Go, DAGs	DAG-based workflow orchestration for CI/CD, ML pipelines and ETL. Parallel execution. 49.9% test coverage.
tensor_ml_project	Production-ready ML system	Python, PyTorch, Transformers	Advanced tensor operations, transformer architecture, real-data training, evaluation and visualisation.
harness2_engineering	Gemini command-line implementations	Go, Rust, Gemini API	AI/ML integration and API development.
SDML_pro	Disease Symptoms ML project	Python, PyTorch, Transformers	GPT-2 for symptom prediction. Trains on Hugging Face dataset.
trip-planner-crew	Autonomous trip planning system	Python, Agents	Agent-based coordination and mathematical foundation explanations.
kafka-go-project	Comprehensive Kafka project	Golang, Kafka, Sarama	Kafka producer and consumer patterns using the Sarama library.
kind-Pub/Sub	Local Pub/Sub emulator	Kubernetes, kind	Runs a local Pub/Sub emulator inside the kind cluster.
adk_production	Agent Development Kit projects	Python, Go, ADK	Building intelligent agents with Python and Go implementations.

Purpose: Demonstrates expertise in modern AI development, from multi-agent systems to production ML deployment.
