Monowork Workspace Overview

Monowork is a multi-project workspace focused on AI/ML development, workflow orchestration, and tensor engineering.

Project	Description	Technologies
nexus	Multi-Agent Graph System DAG-based workflow orchestration for CI/CD, ML pipelines, and ETL Go-based with parallel execution and 49.9% test coverage	Go, DAGs
tensor_ml_project	Production-ready ML system Advanced tensor operations, transformer architecture Real data training with evaluation and visualization	Python, PyTorch, Transformers
harness2_engineering	Gemini command-line implementations AI/ML integration and API development	Go, Rust, Gemini API
SDML_pro	Disease Symptoms ML project GPT-2 for symptom prediction Trains on HuggingFace dataset	Python, PyTorch, Transformers
trip-planner-crew	Autonomous trip planning system Mathematical foundation explanations Agent-based coordination	Python, Agents
adk_production	Agent Development Kit projects Building intelligent agents Python and Go implementations	Python, Go, ADK

Purpose: Demonstrates expertise in modern AI development, from multi-agent systems to production ML deployment.
